

## Supporting Information Figure S6

From: Irl SDH, Schweiger AH, Medina FM, et al. An island view of endemic rarity— Environmental drivers and consequences for nature conservation. *Divers Distrib.* 2017; 00:1–11. <https://doi.org/10.1111/ddi.12605>

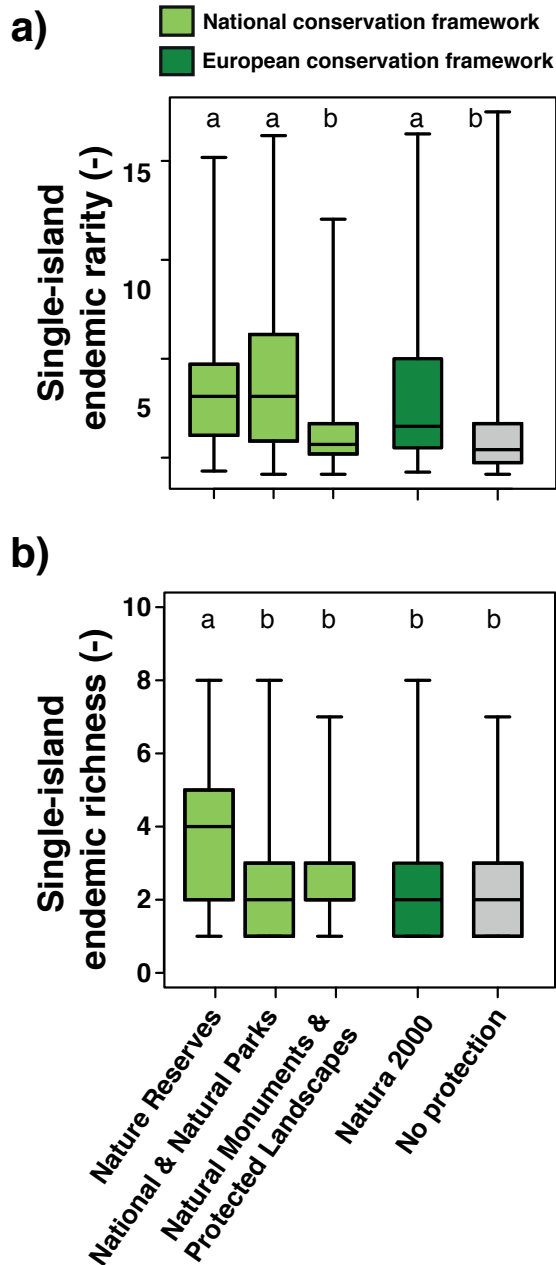

Figure S6. Coverage of (a) single-island endemic rarity (measured as corrected range-rarity richness) and (b) single-island endemic richness by existing protected areas (PAs). Light green PAs were developed under a national conservation framework and are grouped according to their conservation status. The Nature 2000 conservation framework (dark green) was elaborated under EU jurisdiction. The grey boxplot shows values without protection. Minor letters of each boxplot indicate significant groups ( $\alpha = .05$ ). Whiskers extend to the extremes.
