Preface xi  
Programme Committee and Referees xiii  
Acknowledgements xv  

### Part One

**VERIFICATION AND THEOREM PROVING**

1. Formal Verification of the TTP Group Membership Algorithm  
   *H. Pfeifer*  
   3

2. Verification of a Sliding Window Protocol Using IOA and MONA  
   *M. A. Smith, N. Klarlund*  
   19

3. A Priori Verification of Reactive Systems  
   *M. Majster-Cederbaum, F. Salger, M. Sorea*  
   35

### Part Two

**TEST GENERATION**

4. From Rule-based to Automata-based Testing  
   *K. Etessami, M. Yannakakis*  
   53

5. Integrated System Interoperability Testing  
   with Applications to VOIP  
   *N. Griffeth, R. Hao, D. Lee, R. K. Sinha*  
   69

6. On Test Derivation from Partial Specifications  
   *A. Petrenko, N. Yevtushenko*  
   85
Part Three
MODEL CHECKING - THEORY

7. Compositionality for Improving Model Checking
   A. Santone
   105

8. A Model Checking Method for Partially Symmetric Systems
   S. Haddad, J.-M. Ilié, K. Ajami
   121

Part Four
MODEL CHECKING - APPLICATIONS

9. Specification and Verification of Message Sequence Charts
   D. Peled
   139

10. A State-Exploration Technique for Spi-Calculus
    Testing Equivalence Verification
    L. Durante, R. Sisto, A. Valenzano
    155

11. Verification of Consistency Protocols via Infinite-State
    Symbolic Model Checking
    G. Delzanno
    171

Part Five
MULTICAST PROTOCOL ANALYSIS AND SIMULATION

    A. Helmy, S. Gupta, D. Estrin, A. Cerpa, Y. Yu
    189

13. Simulating Multicast Transport Protocols in Estelle
    J. Templemore-Finlayson, E. Borcoci
    205

14. Generation of Realistic Signalling Traffic in an ISDN
    Load Test System using SDL User Models
    T. Steinert, G. Roessler
    219

Part Six
EXHAUSTIVE AND PROBABILISTIC TESTING

15. Satisfaction up to Liveness
    U. Ultes-Nitsche
    237
   R. Hao, D. Lee, R. K. Sinha, D. Vlah

Part Seven
HARDWARE SPECIFICATION, IMPLEMENTATION AND TESTING

17. Verifying and Testing Asynchronous Circuits using LOTOS
   J. He, K. J. Turner

18. Hardware implementation of Concurrent Periodic EFSM’s
   H. Katagiri, M. Kirimura, K. Yasumoto, T. Higashino, K. Taniguchi

19. Modeling Distributed Embedded Systems in Multiclock ESTEREL
   B. Rajan, R. K. Shyamasundar

Part Eight
FORMAL SEMANTICS

20. Compact Net Semantics for Process Algebras
    M. Bernardo, M. Ribaudo, N. Busi

21. A Concise Compositional Statecharts Semantics Definition
    M. von der Beeck

22. Implementing CCS in Maude
    A. Verdejo, N. Martí-Oliet

Part Nine
INVITED PAPERS ON VERIFICATION AND SECURITY

23. From Refutation to Verification
    J. Rushby

    M. Boreale, R. De Nicola, R. Pugliese

25. A Logic of Belief and a Model Checking Algorithm for Security Protocols
    M. Benerecetti, F. Giunchiglia, M. Panti, L. Spalazzi
Preface

The 20th anniversary of the IFIP WG6.1 Joint International Conference on Formal Methods for Distributed Systems and Communication Protocols (FORTE XIII / PSTV XX) was celebrated by the year 2000 edition of the Conference, which was held for the first time in Italy, at Pisa, October 10-13, 2000. In devising the subtitle for this special edition -- 'Formal Methods - Implementation Under Test' -- we wanted to convey two main concepts that, in our opinion, are reflected in the contents of this book. First, the early, pioneering phases in the development of Formal Methods (FM's), with their conflicts between evangelistic and agnostic attitudes, with their over-optimistic applications to toy examples and over-skeptical views about scalability to industrial cases, with their misconceptions and myths..., all this is essentially over. Many FM's have successfully reached their maturity, having been 'implemented' into concrete development practice: a number of papers in this book report about successful experiences in specifying and verifying real distributed systems and protocols. Second, one of the several myths about FM's -- the fact that their adoption would eventually eliminate the need for testing -- is still quite far from becoming a reality, and, again, this book indicates that testing theory and applications are still remarkably healthy.

A total of 63 papers have been submitted to FORTE/PSTV 2000, out of which the Programme Committee has selected 22 for presentation at the Conference and inclusion in the Proceedings. The central themes of this book are the theory and practice of distributed system Verification (with Model Checking playing a predominant role), and Testing. Several papers deal with the analysis of communication protocols, and some of them address, in particular, multicast protocols. Other papers deal with the
specification, implementation and testing of hardware systems. The issue of formal semantics is also covered, but to a lesser extent than in past editions of the Conference, as a further indication of the shift of emphasis from the definition to the application of FM’s. Three internationally recognized speakers, namely Rocco De Nicola, Fausto Giunchiglia, and John Rushby, have provided invited contributions on Verification and on Security protocols: these are collected in the last part of the book.

The Conference has been complemented by two tutorial/advanced seminar tracks including a total of six presentations:

- E. Allen Emerson: Model Checking.
- Jan Tretmans: Specification based testing with formal methods -- from theory via tools to applications.
- Marta Kwiatkowska: Modelling and verification of probabilistic real time systems using probabilistic timed automata.
- C. Petitpierre: Bridging the Gap Between Formal Methods and the Implementation Process.

Finally, a multidisciplinary Satellite Workshop -- ‘Formal Methods Elsewhere’ -- was held on October 10, devoted to applications of FM’s to areas other than communication protocols and distributed systems, such as physics, chemistry, biology, social sciences, arts and humanities, music. After two decades, FM’s are perhaps ready to spread out of their native territory and, at the turn of the millenium, invade new exciting areas of research, for a wider exploitation of the huge intellectual investment behind their definition.
